

Curriculum Statement for Geography at Earley St Peter's CE Primary School

Intent

Studying Geography, we believe, can inspire children with a curiosity and fascination about the world and its people which will remain with them for the rest of their lives. Teaching should equip pupils with strong foundations and a diverse knowledge about people, places, resources and environments and help them understand the interaction between physical and human processes.

Through the study of Geography children's general knowledge will be strengthened and they will become confident using a range of subject specific vocabulary. School trips will give children a range of opportunities and experiences which they may not have access to at home.

Geography forms an important part of the curriculum and is taught individually as well as being incorporated across other areas of the curriculum such as English, Art, DT and Dance. Detailed below is an overview of what your child will learn in Geography through each key stage.

Implementation

In Key Stage One children will develop their knowledge about the United Kingdom and their own locality, taking part in a walk to study their local environment. They'll learn how to use maps and globes, locating and naming the continents and seas using simple compass directions. Children also study seasonal and daily weather patterns in the United Kingdom and compare them to hot and cold areas of the world in relation to the equator and the North and South poles. Children will begin using geographical vocabulary to refer to and discuss the features of human and physical geography.

In Key Stage Two children will extend their knowledge beyond their local area to include Europe and North and South America. This will include studying a range of the world's most significant human and physical features and develop their use of skills to enhance their locational and place knowledge. Children will begin to look at the similarities and differences of human geography such as types of settlements, land use and trade links. They will also study physical geographical elements

such as climate zones, rivers, mountains, volcanoes and earthquakes and begin to understand how the Earth's features are formed, interconnected and change over time. Children will continue to use maps and globes and will begin learning how to read and use an atlas. They will use the eight points of the compass in their work and start to consider the use of four and six figure grid references and ordinance survey maps. Work in Geography will have links across the curriculum as children will use fieldwork to observe, measure and record using a range of methods, including sketch-maps, plans, graphs and digitally.

Impact

Through the study of Geography, our children will engage in creative and critical thinking about change both on a local and global level. Through building on geographical skills and fieldwork within human and physical Geography our children gain a greater understanding of the world in which we live and their place in it.

Assessment

Assessments of the children's knowledge and understanding will be ongoing throughout the year. Assessment will include observations, discussions and written outcomes. A summative assessment of whether a child is working at age related expectations plus their attitude to learning geography will be reported to parents/carers in a written annual report.
